Securing the Financial Services Industry

The Growing Threat of Data Breaches

For any financial services firm, data is the lifeblood of the company—and IT administrators are determined to make sure it doesn't fall into the wrong hands. But security, audit, and compliance teams don't have the insight or capability top stop breaches before they happen.

To harden their security posture, financial organizations need technology to see and control data throughout its entire lifecycle.

ThinAir Data Defense and Intelligence Platform

ThinAir is the security industry's first Data Defense and Intelligence Platform. Our technology provides organizations visibility and protection for all sensitive customer and corporate data. We see everything and protect what matters.

ThinAir automatically tags, tracks and manages all digital assets, giving IT admins the power to see and stop exfiltration instantly. Our platform is threat and transport agnostic, so data is protected against unauthorized access no matter where it goes.

Stop Data Exfiltration

ACCIDENTAL SHARING
Never worry about clicking "send" again. ThinAir stops unintended recipients from opening files without your permission. Keep data safe from the wrong people.

INSIDER THREATS
Stop insider threats at the source. ThinAir's tracks how files are used, accessed and shared worldwide. You can even revoke file access instantaneously.

MALWARE / RANSOMWARE
Render malware ineffective in just one click. ThinAir blocks unapproved processes from doing bad things to your system, so data is protected from the inside out.
